

**Problem statement:**

**Let's suppose a small startup wants to build a Lost and Found platform which would help the end user to search and view the lost items and upload the found items. Let's suppose you got the opportunity to join this startup as a backend Intern. You must provide clear and complete documentation about how to run your program. You should be able to handle different routes in your app. The following features Restful APIs implementation is given to you as a first task to build for a lost and found platform.**

**Approach towards finding adequate Solution:**

The first step took towards the destination is a milestone. The first and foremost requirement for this application is the implementation of models which include user and items. Furthermore, Modular approach is followed and implemented on the given task. Fast Api and SQLAlchemy are used and all the end points are defined. The documentation of Fast Api helped me a lot throughout the project. Fast Api server is used for the testing part of the application.

**Problems faced during the task:**

Fast Api is something never heard before the implementation of this task. Several technical issues were faced during the implementation.

Docker "This run on my machine" in order to overcome this problem as far as I have learned about Docker. Docker implementation is bit tricky and annoying as a beginner I faced a lot of issues while implementing Docker so in at the end I removed implementation of docker from my application. Several other technical issues are also faced during implementation regarding object relational mapping (ORM) and the concepts to grasp on includes Synchronous and Asynchronous tasks. Figures of the project including fast Api server testing are attached.

Fig :1

Name	Description
<b>name</b> * required string (query)	<input type="text" value="Ali"/>
<b>email</b> * required string (query)	<input type="text" value="ali@yahoo.com"/>
<b>password</b> * required string (query)	<input type="text" value="Asdfg@12345"/>
<b>contact</b> * required string (query)	<input type="text" value="03105444321"/>

Execute

Clear

Responses

Curl

```
curl -X 'POST' \
'http://127.0.0.1:8000/create_user?name=Ali&email=ali@yahoo.com&password=Asdfg@12345&contact=03105444321' \
-H 'accept: application/json' \
-d ''
```

Request URL

```
http://127.0.0.1:8000/create_user?name=Ali&email=ali@yahoo.com&password=Asdfg@12345&contact=03105444321
```

Server response

Code	Details
200	<div>Response body</div> <div><pre>{   "user_id": 3 }</pre></div> <div>Download</div>

DELETE /delete\_item Delete Item

Parameters

Cancel

Name	Description
<b>id</b> * required integer (query)	<input type="text" value="1"/>

Execute

Clear

Responses

Curl

```
curl -X 'DELETE' \
'http://127.0.0.1:8000/delete_item?id=1' \
-H 'accept: application/json'
```

Request URL

```
http://127.0.0.1:8000/delete_item?id=1
```

Server response

Code	Details
200	<div>Response body</div> <div><pre>{   "Item deleted with coressponding Id",   1 }</pre></div> <div>Download</div>

Fig : 3

Parameters

Cancel

Name	Description
<b>id</b> * required integer (query)	<input type="text" value="3"/>
name string (query)	<input type="text" value="bottle"/>
description string (query)	<input type="text" value="round sports water bottle"/>
status boolean (query)	<input type="text" value="true"/>
lost_location string (query)	<input type="text" value="lost_location"/>
found_location string (query)	<input type="text" value="Islamabad"/>
date string(\$date) (query)	<input type="text" value="date"/>

Execute

Clear

Responses

Curl

```
curl -X 'PUT' \
'http://127.0.0.1:8080/update_item?id=3&name=bottle&description=round%20sports%20water%20bottle&status=true&found_location=Islamabad' \
-H 'accept: application/json'
```

Request URL

```
http://127.0.0.1:8080/update_item?id=3&name=bottle&description=round%20sports%20water%20bottle&status=true&found_location=Islamabad
```

Server response

Code	Details
200	<div><div>Response body</div><div><pre>{   "ITEM UPDATED SUCCESSFULLY",   {     "description": "round sports water bottle",     "found_location": "Islamabad",     "id": 3,     "date": "2021-03-23",     "user_id": 0,     "name": "bottle",     "lost_location": "stranded&amp;deserting",     "status": true   } }</pre></div><div><div>Download</div></div></div>
